

Shown With Optional DC

ECO 3624

The ECO line of equipment was designed for the hobbyist or very light production use. The ECO is constructed from heavy gauge metal, which is continuously welded. Also incorporated into the line are several products from the BLAST-IT-ALL[®] production blasting equipment, proven reliability such as the blast gun. The ECO is also designed for a small company to start blasting with only a dust collector; then, without a lot of expense enables that user to convert to a reclamation system with the ECO Reclaimer Kit.

While, the ECO is limited to specifically smaller sizes than production type equipment, but it is considered the highest caliber blaster manufactured today.
